Speakers will be announced in The New Year

Notes. FAP is an inherited condition which mainly affects the large intestine (also known as the large bowel or colon and rectum). People with FAP develop many polyps (which are like small cherries on stalks) inside their large bowel. There are many different types of polyps but these particular polyps are called adenomas (the "denomatous" in FAP). An adenoma can in time turn cancerous. There are also other effects of the Gene which may affect those with FAP.
